U.S. POSTAGE PAID
BECKLEY, WV 25801
PERMIT NO. 19

DECEMBER 1, 2013

Low-cost bolter repairs may seem smart. But look at the facts, consider the risks, and it's not so attractive.

Before risking the efficiency of your roof control operation, call Fletcher next time you need parts and service.

Small price for peace of mind.

SHAKERZZZ AND MOVERZZZ

"CONVEYOR BELT IMPROVERZZZ"

CHARLESTON, WEST VIRGINIA

304-342-2862 FAX: 304-342-3215

Over 28 Years Installation and Vulcanizing Experience

- ▶ STEEL CORD SPLICING UP TO 1800 PIW
- ▶ SURFACE/PREP PLANT INSTALLATIONS AND CHANGE OUTS
- ▶ SURFACE AND UNDERGROUND VULCANIZING
- ▶ PULLEY LAGGING SHOP AND FIELD IN PLACE - CERAMIC AND RUBBER

WE BUY AND SELL USED CONVEYOR BELT

Currently Over 40,000 Ft of 36"-48" 4/800-1000
1/4"-3/16"x1/8" Long Lengths, Overland
Conveyor Belting - Excellent Condition

Belt Driven Trickle Duster "Belt-Trick"

300 lb capacity dust tank and a ceramic embedded roller that drives off the bottom belt and transfers dust up to 10 lbs/min through 15 feet of hose. Patent Pending.

TDT Trickle Duster "The Worm"

Powered by a 5 HP 480V or 575V AC motor and a planetary gear-driven auger that feeds dust at a continuous rate of 90 lb/hr into the air stream by a 3300 blower. In contrast to other dusters, the Worm does not blow air directly into the hopper, allowing the delivery of dry dust into the air stream, creating further carry down the entry. Other trickle dusters blow 100% humidity air into the dust tank, causing the dust to become wet, and the damp dust will not travel as far in the return entries. Patent Pending.

TDT LLC

202 Stadium Drive - Mount Hope, WV 25880

Email: info@tdt-llc.com

Call us Toll-Free at 1-877-258-5567

TDT Scoop Pressure Duster "Snowman"

Boasts a capacity of 700 lb and will auger feed 70 lb/min through 2" hose up to 200'. Primarily used in place of the bantam style dusters but can be operated by one man and refilled less frequently.

TDT Scoop Flinger Dusters ("TDT-88")

The original OEM scoop and coal hauler flinger duster. Dust capacity based on the size of the bucket. The ejector cylinder advances dust to the auger allowing you to dust through two flingers. Patent No.: 4872598

TDT Pull Behind Flinger Duster ("TD2")

A 48" wide dual auger flinger duster with a capacity of 1,520 lb, equipped with a 36-volt motor and on-board batteries, intending to be used along belt lines where width is a concern. Also available in a single-auger 40" wide version. Patent Pending.

TDT Belt Clamps

TDT 4405 "Heavy Duty"

- 3,000 lb pull rating
- Accepts up to 7/8" thick belt
- Utilizes 3/8" chain (no cable)
- Can be pulled across top rollers
- Includes: 2 left, 2 right clamps, 2 safetychains, 4 shackles

TDT 4404

- 3,000 lb pull rating
- Accepts up to 5/8" thick belt
- Utilizes a cable (no chain)
- Can be pulled across top rollers
- Includes: 2 left, 2 right clamps, 2 safetycables

Valley Mine Service

Serving the Mining Industry Since 1969

Valley Mine Service offers direct OEM replacement parts for underground miners, haulage systems, shuttle cars, scoops, feeders, etc. We have component exchanges or the parts to rebuild the components. VMS has been in mining machinery sales since 1969, and the parts and rebuild business since 1980. We are big enough to supply your parts and rebuild needs, but still small enough to provide personal account attention. **Please contact us for all of your underground mining machinery parts and rebuild needs.**

PRODUCT NEWS

Portable Pitbull™ 2300 Screening Plant Features Redesigned Conveyor, Increased Output, Electric Option

LAKE CITY, Pa. (Nov. 13, 2013) – The rugged Pitbull 2300 Screening Plant manufactured by Lake Erie Portable Screeners gives landscapers, contractors and municipalities a compact and portable machine that delivers maximum efficiency and high outputs with a wide range of materials such as topsoil, mulch, gravel and asphalt. It is available in both diesel and electric-powered models.

The compact and portable Pitbull 2300 can be towed directly to the excavation site for fast processing of materials.

Lake Erie Portable Screeners developed the Pitbull 2300 with simple operation, maintenance and transport in mind. The machine incorporates several unique features, such as full hydraulic operation, tubular frame construction, a Torflex axle and a reversible shaker, that set it apart for mid-size screening projects.

The company manufactures Pitbull 2300 frames with high-quality, structural tube steel. The tubular construction reduces noise and vibration, which in turn minimizes the risk of cracks and structural failures that are common in machines with C-channel construction. The screening plant incorporates heavy-duty materials throughout, all the stress points are fully gusseted, and both attachment points and stress points are 100 percent welded with high-strength steel. The result is a machine with a curb weight of 13,440 pounds.

The Pitbull 2300's 20-foot-long stacking conveyor adjusts hydraulically from heights of 6 feet, 8 inches up to 13 feet to feed material directly

into a tri-axle or dump truck. This allows users to create larger stockpiles, which increases efficiency by reducing the number of times equipment needs to be moved. These attributes, combined with the ability to place the machine at the point of excavation, minimize spillage and dramatically reduce cycle times and haulage costs typically associated with loading and unloading material when using stationary plants.

With the machine's legal width of 8 feet, 4½ inches and either a standard pintle hitch or optional gooseneck towing package, the Pitbull 2300 is easy to move from site to site, as well. A 10K Torflex axle with oil bath hubs provides a cushioning effect so the unit tows smoothly and stress to the tow vehicle is reduced. Upon arrival, users can quickly and easily lower the unit to operating position with the hydraulic system, which eliminates pressure on the axle, tires or wheels during screening. The hydraulic system raises the machine back to towing position with the flip of a lever. The machine also features heavy-duty suspension, electric breaks and trailer lights for safe and legal travel.

The screening plant is equipped with a loading apron that accepts up to three yards of material at a time and up to five yards at a time with a slower dump speed. With its low dump height of 8 feet, 4½ inches, users do not need loading ramps; they can fill the hopper using typical construction equipment like skid steers, backhoes, loaders or excavators.

The portable screening plant also includes an upper and lower screening deck, each with more than 41 square feet of screening area. The upper and lower decks are equipped with two sections of screening media on each deck. The company offers optional punch plate or finger decks for the top deck in addition to a wide range of screen sizes for processing all types of materials. Operators can quickly and easily change screens by loosening tension bolts that hold each one in place. The screeners also can be equipped with optional upper and lower discharge chutes to allow for up to three different sizes of screened materials.

In addition to the adjustable stacking conveyor, the Pitbull 2300 features a hydraulically driven transfer conveyor that moves screened material from the hopper to the stacking conveyor. Hydraulic motors on the conveyors provide continuous flow of power to achieve production rates up to 100 yards per hour of clean, saleable material. Because the conveyors are hydraulic rather than chain- or belt-driven like many competing models, the Pitbull 2300 eliminates the risk of power loss and downtime due to broken chains or belts.

The unit's power plant is equipped with a reliable 47-horsepower Yanmar diesel engine that complies with 2008 EPA Tier 4 and EU Stage IIIA emissions standards. The engine compartment features large doors at the top and bottom that open wide for easy maintenance and repair access. The company also offers a 60 horsepower, 480-volt AC electrical package for applications in confined or enclosed spaces like tunnels, mines and indoor projects.

Lake Erie Portable Screeners designs, engineers and manufactures versatile, heavy-duty, commercial-grade screeners and related equipment at its headquarters and manufacturing plant in Lake City, Pa. With 35 years of construction equipment manufacturing experience and expertise, the company understands the construction business and knows how to engineer products that will last under the toughest working conditions. Its durable and versatile Pitbull 2300 screens a wide range of materials, such as soil, mulch, asphalt, stone and gravel for use by landscapers, energy facilities, contractors and municipalities.

IRON CLAD RULES OF MINING

The 4 major issues that have to be addressed to mine coal effectively are: people in, people out, material in, material out. If all of these can not be achieved in a positive manner, the battle is lost before it begins.

In designing the IRONHORSE, we attack the material handling parts of that equation. I am proud to state:
"We accomplished our goal."

Look out World, here we come!

IRONHORSE

Track Mounted Utility Vehicle 17,000 lbs

56" High - 10' Reach
